F-ATS32M

Automatic Transfer Switch

32 Amp

ION's Intelligent 32 Amp Automatic Transfer Switch (ATS) has been designed with two independent power inputs to supply power to the load from a primary and alternatively secondary power source in a compact 2RU foot print. Should the primary power source fail, the secondary will automatically back up the connected equipment without any interruption. The transfer time from one line to another is seamless to the connected equipment. After switching to a secondary power source, the ATS can also switch power back to the primary input when power to the primary input is restored. The ION Intelligent 32 Amp Automatic Transfer Switch (ATS) comes with a communications slot that can have an optional network card that allows for remote in network connectivity and management through HTTP, SNMP and SSH protocol.
